Sample Outputs:

Question No 01:

1. Home Page (Lab-01.html) – Navigation Page

The Home Page serves as the main interface of the Pine Valley Furniture web application. It displays the title of the company and a styled navigation menu containing links to all functional pages including customer registration, product searching, order placement, product catalog update, and payment provision. This page allows users to easily navigate between different modules of the system.

2. New Customer Registration Page

The Customer Registration page allows new customers to enter their personal details such as name, address, city, state, and postal code. The information is entered using input fields arranged in a table layout. A "Register" button is provided to submit the data, and a Help Page link is available to guide users if needed.

Customer Information

3. Product Searching Page

The Product Search page enables users to search for available furniture products by entering a product name in the search field. A "Search" button is provided to initiate the search process. This page demonstrates how customers can look up products in the system. A Help Page button is also included for user assistance.
